The low-cost Alternative: The Internal Taper Gauge IKT-OS

The term OS is an abbreviation which means "without stop bar". By the omission of the bar, the alternative internal taper gauge can be manufactured at a lower cost which in turn renders a favourable sales price.

The IKT-OS is implemented to measure the largest diameter of internal tapers or tapered grooves. In contrast to its brother product, the IKT-OS requires a contact surface and cannot be used with thin-walled work pieces.

Available in the following models:

IKT90-1-OS Measuring range 0,5-20

IKT90-2-OS Measuring range 20-40

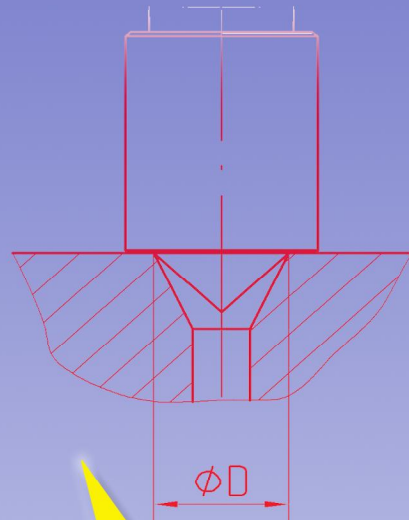

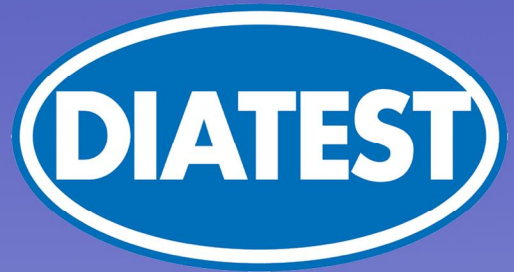

IKT60-1-OS Measuring range 0,5-12

IKT60-2-OS Measuring range 10-21

IKT127-1-OS Measuring range 0,5-20

Standard setting masters can be utilised, as well as the corresponding dial indicator or digital dial indicator IKT-MU1086W.

Available on request.
